Github: github.com/sezfabian

AI Engineering Specialist (Master's track) with 4+ years as a Software Engineer, specializing in the systemic design and architecture of scalable full-stack solutions (Python, Django, FastAPI, React, Vue, AWS). Proven ability to build, optimize, and grow business operations through technology, with experience on the remote global scene collaborating with leading AI labs to optimize leading Large Language Models (LLMs) for software engineering tasks. Expert in evaluating, training, and standardizing Generative AI tools. I leverage a strong engineering foundation, a deep commitment to AI learning & research, and a passion for translating & communicating technical concepts to non-technical stakeholders, to implement practical technological solutions that deliver measurable business value and streamlined workflows. International student with right to work in the UK.

EXPERIENCE

Software Engineer, AI Training

January 2024 - August 2025

Pareto AI, Stanford, California

- Critically assessed the algorithmic quality and functional integrity of AI-generated code, ensuring adherence to high engineering standards. My contributions were instrumental in helping the team boost the LLM's accuracy in competitive programming from 30% to over 90% within one year.
- Engineered and standardized structured rubrics and comprehensive training pathways to guide the training of AI models, demonstrating an ability to systematize and influence AI learning outputs for consistent, high-quality solution generation.
- Designed and developed in-house tools and applications(AWS+FastAPI+React/Vue) aimed at optimizing contributor workflows, including a gamified training/onboarding system and essential utilities for tracking tasks, and managing submissions & reviews.
- Recognized as for exceptional quality and volume of AI training contributions.

Full-Stack Software Engineer

November 2023 – July 2024

Emmerce Ltd, Nairobi, Kenya

- Defined and Led the technical strategy, problem definition, and system architecture design for multiple E-commerce and SaaS web and mobile-app projects, driving the execution from conception to deployment.
- Engineered secure, scalable, and efficient backend solutions(PostgreSQL, Django, FastAPI, Redis, REST APIs) for multiplatform applications, which accelerated production timelines and supported robust business expansion. Ensuring high system reliability through Test-Driven Development (TDD) and comprehensive unit testing (Pytest) with robust technical documentation (MkDocs).
- Successfully integrated critical third-party APIs including e-commerce platforms (Amazon, Jumia), payment gateways (Stripe, Mpesa, PesaPal), marketing automation (Brevo), and ERP systems (SAPS), ensuring seamless operational functionality and data exchange.
- Designed and engineered and tested responsive SaaS web-apps and dashboards in VueJS, prioritizing system functionality, elegance, and user-friendly design to deliver effective, tailored business solutions.

Software Engineering Apprentice

October 2022 – October 2023

ALX Africa, Nairobi, Kenya

- Selected for a rigorous 12-month full-stack engineering program focusing on System Design Principles, Data Structures & Algorithms, and web Development. Building a strong, academic foundation for complex software development.
- Collaborated effectively with peers to build and successfully engineered and deployed prototypes with founders under the (ALX founders program), demonstrating the ability to apply theoretical knowledge to practical, large-scale system problems and quickly establish functional minimal viable products (MVPs).
- Actively worked with technical mentors to improve programming skills and systematic engineering practices, and adherence to industry best standards.
- Developed core expertise by completing specialized projects focused on building a custom C library and shell programs in C, that showcased a deep understanding of low-level systems and memory management.
- Cultivated robust leadership and soft skills, including communication, proactiveness, and advanced problem-solving, through collaborative remote work with peers and mentors.

Technical Assistant Manager & IT Systems Specialist

February 2020 - April 2023

Value Chain Supplies, Eldoret, Kenya

- Achieved 20% cost reduction and improved overall operations efficiency by strategically managing the acquisition, integration, and maintenance of all Retail Management Systems (POS, inventory) and Surveillance infrastructure.
- Developed and maintained the business website and e-commerce platform, significantly enhancing brand visibility and online presence that drove over 10% annual revenue growth.
- Managed all in-house IT infrastructure (network, hardware, software) and provided rapid, comprehensive technical support to staff and customers, minimizing technical downtime.
- Proactively involved in key management functions (staff training, recruitment, and store operations).
- Designed and executed captivating branding materials (logos, banners, flyers, brochures, merchandise) and led targeted marketing campaigns that significantly enhanced local brand visibility, contributing directly to a revenue growth of over 60% in two years.

EDUCATION

Master of Science in Advanced Computing with Artificial Intelligence

Graduation Year: 2026

University of Stirling

Bachelor of Science in Electrical and Electronics Engineering

Graduation Year: 2022

University of Nairobi

SKILLS

Programming Languages: Python, JavaScript, R, TypeScript, SQL
Frameworks: Django, FastAPI, VueJs, React, NodeJs, Pytorch
Databases: PostgreSQL, MongoDB, MySQL, Redis
Testing & Documentation: Pytest, Playwright, PostMan, MkDocs, Test Driven Development (TDD)

Cloud & DevOps: AWS, Azure, Docker, CI/CD Principles, Version Control(git)
Engineering Concepts: Microservices Architecture, REST APIs, Object Oriented Programming, Embedded Systems, Competitive programming.
Data Science: Data Mining, Statistical Analysis, Feature Engineering, Pandas, Numpy, Network analysis(iGraph)

AI & Machine Learning: Supervised, unsupervised and reinforcement learning, CNNs, RNNs, Natural Language Processing, Data Preprocessing, Optimization algorithms. RAG applications.
AI Developer Tools & Environments: Docker, Cursor, Claude Code, OpenCode, Gemini CLI

LANGUAGES

English: Fluent

Swahili: Native

CERTIFICATIONS

[AWS Cloud Practitioner.](#)
[ALX - Holberton School, Software engineer.](#)
